

### *Zione's Rapid Assessment for Ransomware Resilience*

Your company has its data backups. You're following best practices. Your monthly security check from a few weeks ago looked good. No news is good news. But what your scheduled monthly testing may have missed is that just a few days ago, hackers surreptitiously gained access to your environment, and have been laying the groundwork for a cyberattack that's about to throw your company and its operations into turmoil.

You might think you're doing everything right, but with the rapidly evolving cyber threat landscape, you must be certain that you're meeting Resilient KPIs. If you're not already there, it can seem like a daunting task to make the shift. Luckily, Zione Solutions is here to help ensure you're prepared and assist you as you transition your company to become more Ransomware Resilient.

Zione provides a 4-hour, no-charge Ransomware Resilience **Rapid Assessment**, covering several key resilience domains, to let you know if your organization is setting and meeting resilience KPIs. From knowing your Recovery & Business Continuity KPIs, to determining your investment vs Risk Reduction spending, to Incident Readiness from the C-suite to the support desk, we will help you identify where you need to be, and assist you with getting there.

Organizations today face increasing threats from ransomware, operational disruption, and evolving cyber risks. Zione provides a comprehensive Rapid Assessment designed to evaluate your organization's overall cybersecurity preparedness, operational resilience, and recovery capabilities.

Our assessment delivers a clear, actionable view of your current security posture across technology, processes, and organizational readiness. With this, your IT leadership will be able to quickly identify your organization's strengths, uncover vulnerabilities, and prioritize improvements before threats become incidents.

The Rapid Assessment evaluates multiple layers of cybersecurity and resilience, including:

- Endpoints and Device Security
- Network Security and Segmentation
- Cloud Resilience and Recovery Readiness
- Identity and Access Management (IAM)
- Application and Database Security
- Standby Systems and Failover Orchestration
- Data Replication and Recovery Processes
- Immutable Backup Strategies
- WORM (Write Once, Read Many) Technology
- Cross-Zone & Cross-Region Resilience Planning
- Static Resilience and Infrastructure Hardening
- Operational, Employee, and Management-Level Security Practices

Once assessment responses are completed, the findings are measured against current industry standards, best practices, and modern cybersecurity resilience recommendations. This allows Zione and your organization to identify your existing capabilities and controls that demonstrate strong preparedness and resilience, as well as areas showing opportunity for further refinement to a higher level of resilience maturity. Lastly, it also reveals Critical Risks, where immediate gaps or vulnerabilities can increase exposure to cyberattacks, ransomware, or operational disruption. These key insights into cybersecurity readiness, operational and recovery resilience gaps can then be followed-up by customized recommendations for remediation and improvement from Zione's team of security experts.

### *Zione Solutions, LLC.*

Zione Solutions combines practical operational expertise with modern cybersecurity and resilience strategies to help organizations strengthen defenses, reduce risk, and improve business continuity preparedness. A resilient organization begins with understanding where vulnerabilities exist and where strengths can be reinforced. Our Rapid Assessment, combined with our team's expertise, provides the clarity needed to make informed cybersecurity and resilience decisions with confidence.

**Modernize. Secure. Scale.**
