

Oracle VM and Zione Solutions – a Winning Combination

Oracle Technology, combined with Zione Know-How, is a great combination for companies seeking to leverage VM technology while ensuring their operating, development, and on-going support costs are minimized.

What Oracle Provides:

- A tightly integrated and fully compatible technology stack for all Oracle Based products including RDBMS, Web Services, Storage, and Application Stacks.
- ‘Control from a Console’ of all facets of a private cloud infrastructure including: High Availability, Networking, Storage and Virtual Machine configurations of any shape. This integrated approach will speed support of the infrastructure while possessing easy visual operation.
- Containerization of many types of services (application, web servers, etc.) that allow for re-deployment to other OVM configurations. Portability is a key feature for large installations as well as small ones.
- Cost-effective use of Virtual Technology versus other vendors (e.g. VMWare).

What Zione Provides:

- An Oracle preferred partner in implementation of OVM for clients. ‘Boots on the ground’ implementation from inception to final sign-off. Zione offers a full spectrum of services for the client, spanning machine configuration, infrastructure design & build, backup, application continuity, and disaster recovery.
- Zione runs OVM internally, and offers clients access to VM hosting that is completely segregated and secure from its own, and other clients’, Zione services (IaaS services). Complete support and scale-up and scale-down according to client needs and goals.

Call Zione Solutions for a no-obligation assessment, and find out how your organization could benefit from Virtual Technologies today.
