

Clouds on your Horizon? Zione Solutions Can Get You There

Is your organization, like most, evaluating a move to a Cloud platform?

Zione Solutions has a unique depth of knowledge, skill, and experience to be your partner and make your move from where you are today to the best information management technology solutions for your future.

Our strengths are our technology, client-focused independence, and expertise in data & database migrations.

Zione Solutions has many years of experience migrating customers to private clouds, hybrid clouds, and public clouds. For some customers one is the best answer, for others a combination of two or more is best.

Our teams have the expertise to help you migrate your data and your databases into or out of an existing private or public cloud and into any of the major public clouds such as Oracle, Microsoft, Google, or Amazon.

Zione Solutions' expertise in data and database migrations, and unique Client-Focused approach, means that we will work with you to identify where opportunities for improvement can be found. Databases can be migrated between vendors such from SQL Server to Oracle, editions can be changed, versions updated, and it is common for space requirements to be significantly reduced.

The Zione team brings together decades of expertise in security, auditing, compliance, and encryption. Throughout the Cloud Migration process your assets will be protected and we can show you how your new environment will be significantly more secure than what you have now.

Zione Solutions can work with you to identify the best solution for ongoing management. We can provide knowledge transfer to your existing team so that they understand the process and have the skills to manage post-migration. We can provide a managed services solution that relieves you of the complexity. And, we can customize a solution that meets your needs by combining your current resources and selected managed services offerings.

Call Zione Solutions today to find out how we can guide you on your journey to the Cloud.
