

Zione Solutions is built to provide a strong & efficient set of Skills for our Clients. Amongst our Capabilities are many years of expertise geared around Business Intelligence & Analytics. Business intelligence (BI) is a technology-driven process for analyzing data & presenting actionable information to help executives, managers & other corporate end users make informed business decisions.

BI lets you apply chosen metrics to potentially huge, unstructured datasets, & covers querying, data mining, online analytical processing (OLAP), & reporting as well as business performance monitoring, predictive & prescriptive analytics.

We Specialize in many of the BI Tools available out in the Market. Amongst some of them (depicted to the right), are Tableau, Microsoft Power BI, OBIEE, Cognos, Business Objects, & many more.

BENEFITS

- Faster reporting, analysis or planning
- More accurate reporting, analysis or planning
- Better business decisions
- Improved data quality
- Improved employee satisfaction
- Improved operational efficiency
- Improved customer satisfaction
- Increased competitive advantage
- Reduced costs
- Increased revenues
- Saved headcount

DATA & DELIVERY

Data can be sourced from any & every source. Today, you can derive correlations between sources & do this without much intervention. Most tools allow you to manipulate the Semantic Layers which give you the flexibility to dig deeper into the data. With Data Visualizations, see the data rather than just reading a spreadsheet. BI Tools allow for quick & easy consolidation of data & KPI Delivery. Big Data can be leveraged for advanced computation of larger datasets.

BI & ANALYTICS

- BI asks the Questions:
 - What happened?
 - When?
 - Who?
 - How many?
- Analytics asks the Questions:
 - Why did it happen?
 - Could / will it happen again?
 - What will happen if we change xyz?
 - What else does the data tell us that we never thought to ask?
